# ASCS ANNUAL REPORT

DEPT. OF ACRIC LAGRI " RECO

NOV 4 1971

REMENT SECTION NT SERIAL RECORDS

UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

ISSUED - MARCH, 1970

#### FOREWORD

This annual report is prepared by the Idaho State Office of the Agricultural Stabilization and Conservation Service to summarize the participation of Idaho farmers in Federal farm programs during the past year.

It was prepared for the purpose of furnishing a source of information for ASCS personnel, committeemen, agricultural agencies, and others interested in Idaho agriculture.

The Idaho State ASC Committee sincerely appreciates the work of the persons involved in the preparation of the report.

IDAHO STATE ASC COMMITTEE

George L. Blick, Chairman Arvil Millar, Member J. Adrian Nelson, Member Dr. James E. Krause, Member Ex Officio

STATE EXECUTIVE DIRECTOR

Forest J. Severe

MARCH, 1970

#### AGRICULTURAL CONSERVATION PROGRAM

The Agricultural Conservation Program is a Farmer-Government partnership arrangement whereby Federal cost-sharing may be requested by farmers and ranchers to assist in the performance of approved soil building and soil and water conservation practices.

For over a quarter of a century, the Agricultural Conservation Program has been steadily fulfilling its basic function of helping conserve and build better strength into the Nation's farmland. This has created a new opportunity for improvement in rural areas. It has advanced the economic and social welfare of farm and city people alike.

Agricultural Conservation Program cost-sharing assistance frequently spells the difference between willingness and ability to act, between knowing about the advantage of conservation, and actually applying it on the land.

(Continued)

The Agricultural Conservation Program in Idaho is administered on the basis of the following general principles:

- 1. Conservation practices are adapted at the local level within the scope of broad general authorities to achieve the maximum conservation benefit in the county and State.
- 2. Particular encouragement is given to family operated farms to undertake a comprehensive effort of conservation practices which provide the most enduring conservation benefits practicably attainable in the current program year on the land where they are applied and to the community of which those lands are a part.
- 3. The program is to be used to significantly reduce the loss of agricultural soil, water, woodland, or wildlife resources and to improve the prospect of their efficient multi-purpose use in providing an adequate supply of food, fiber, water, and wildlife for the future and for the general improvement of man's total environment.
- 4. Assistance for conservation measures is to be used to encourage better land use and a well balanced effort to deal with all conservation problems of the farm or ranch.
- 5. If the farmer or rancher is to bear the primary responsibility for maintaining our agricultural land, water, woodland or wildlife resources in a manner which assures their availability for productive use for the benefit of generations yet unborn, the public in fairness should assume responsibility for a part of the cost of the conservation measures needed to preserve those resources for the future while they are being used to meet our current needs.

#### EMERGENCY CONSERVATION MEASURES

This phase of the Agricultural Conservation Program was made applicable to Custer and Jefferson Counties due to the flood in 1969. Federal cost-sharing under the Emergency practice provision is only offered for replacing a conservation practice or restoring land to its normal productive capacity. Program principles set forth under the Agricultural Conservation Program were applicable to the administration of the flood emergency in the two counties.

#### CROPLAND CONVERSION PROGRAM

The Food and Agriculture Act of 1962 authorized the Department of Agriculture to develop a pilot program to test in selected counties the feasibility of a long-range land use adjustment program. This program provides for adjustment payments, practice cost-sharing, and related technical assistance under 5- or 10-year agreements.

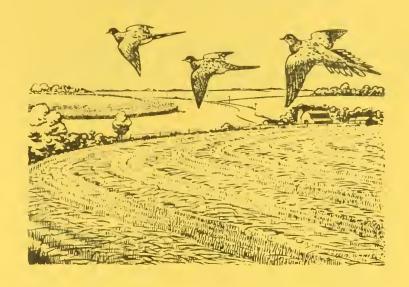

The program is designed to provide the best opportunity for bringing about a permanent shift of cropland to other and more needed uses for the purpose of conserving and developing soil, water, forest, wildlife, and recreation purposes. The farmer had the option to take the adjustment payments in either a lump sum to help him adjust to a different type of farm enterprise or to accept payments on an annual basis up to five years.

#### CONSERVATION RESERVE PROGRAM

The Conservation Reserve Program, known as the Soil Bank Program, was a voluntary program designed to retire cropland from production and to also preserve the land with good soil and water conservation measures. Farmers could either designate all eligible cropland or participate on a part farm basis.

Farmers were offered cost-sharing to assist them in establishing conservation practices on the land placed in the Soil Bank. Annual payments were made for the period of the contract, providing all provisions of the contract were met. No harvesting of crops or grazing was permitted during the contract period.

Contracts were entered into for periods of three, five, or ten years on eligible land, beginning in one of the years 1955-60 with the final contract year being 1969. This report covers the contracts still in effect in 1969.

#### CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program is a voluntary program to help farmers divert cropland to protective conservation uses under long-term agreements. Land may be taken out of crop production for periods of five to ten years.

Participants receive adjustment payments based on the value of the crops which otherwise would be produced on the land. They are eligible for conservation cost-share payments on the diverted land. Those who agree to permit free public access for fishing, hunting, hiking and trapping, may get an additional per-acre payment.

Under another provision called Greenspan the Cropland Adjustment Program will help local, State and other government agencies acquire cropland for non-farm uses such as the preservation of open spaces and natural beauty, wildlife development and recreation, and the prevention of air and water pollution. The program shares the cost with these agencies of establishing conservation practices on the cropland.

Cropland Adjustment Program makes available for noncrop use acreage that otherwise would be producing crops not needed. It supplements, rather than replaces, the annual commodity diversion programs.

Funds were not appropriated for entering into new agreements in 1968 or 1969. This report covers agreements entered into in 1966 and 1967 that are still in effect.

#### WHEAT PROGRAM

The 1969 wheat program was geared to dollar export markets as well as to domestic wheat needs. Among other things the program was designed to maintain a good balance between supply and demand.

The program was voluntary. To receive program benefits (wheat certificate and loans) participants planted within their allotment, maintained their farm's conserving base in conserving uses and planted within the allotment on any other wheat farm in which they had an interest. Producers who participated in both the wheat and feed grain program could substitute wheat for feed grain and vice versa. In addition participants whose farm had a barley base could substitute wheat for barley.

Farmers receive the full amount of their certificate in cash from the Government. Processors purchase certificates at the rate of 75 cents per bushel from the Government to cover the quantity of wheat used for domestic food. The remaining portion of the certificate value to farmers comes from the Government to give farmers at least parity for that portion of their crop.

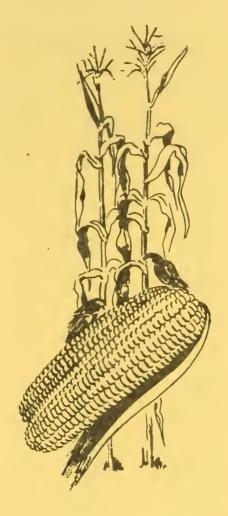

Participation and payment data for Idaho wheat producers is shown in the following tabulation.

FEED GRAIN PROGRAM

The 1969 program was designed to reduce total supplies and to strengthen prices paid farmers for feed grains.

The program was voluntary. Participants reduced their feed grain base by at least 20%, maintained the farm conserving base, placed acreage diverted from feed grains to conserving use, and planted within the feed grain base on any other farm in which they had an interest.

Price support loans, price support payments, and in some cases diversion payments, were made available to participants. As with the wheat program, substitution was permitted.

A summary of participation in the feed grain program by Idaho farmers is shown in the following tabulation.

SUGAR PROGRAM

The United States Sugar Program has a three-fold purpose:

- 1. To protect the welfare of the U. S. Sugar Industry.
- 2. To provide U. S. consumers with ample sugar at reasonable prices.
  - 3. To promote and strengthen the export trade of the U.S.

To achieve these goals, the Sugar Act establishes a quota system (share of the U. S. market), thus regulating supplies of sugar sold in the U. S. The largest part comes from domestic areas. (Sugar produced in the U. S. )

To help maintain farm income from sugar crops and provide an incentive to growers to adjust their production to quota and carryover needs, "conditional payments" are made. In addition to adjusting production producers must also comply with minimum wage and child labor requirements.

Payments to growers are financed out of the general funds of the Treasury. An excise tax on all sugar marketed within the quota system provides funds for the Treasury which more than offset all costs of the program. The revenue from this tax from 1938 through fiscal year 1966 exceeded total sugar program expenditures by about \$550 million.

"Conditional payments" to Idaho sugarbeet producers in return for their compliance with the production adjustment and other provisions of the program is shown in the following tabulation.

**COMPLIANCE** 

### Purpose of Compliance

Compliance is the process of determining the eligibility of the farmer for price support, certificate and acreage diversion payments, conservation cost-sharing, and other benefits under ASCS programs. In all production adjustment and conservation programs the farmer receives certain benefits from the Government. In return, the farmer agrees to do or to refrain from doing certain things which determine whether he has complied with the requirements of the program acreage and land use determinations.

### How Compliance Is Determined

For many years employees of the county ASCS office visited each farm participating in a program and measured the program acreage. A new method called producer certification or compliance by certification was employed and expanded to all counties in the State in 1966. Under this method the farmer is responsible for accurately reporting the program acreages to the county office by a specified date. Producers are furnished photocopies of their farms showing acreages for each field of cropland. Administrative control visits are made on farms selected at random to insure that acreage certifications are accurate.

### Measurement Service

This service is available to any farmer for any program purpose such as measuring and staking areas to be planted or diverted, measuring after planting or measuring total cropland. A nominal charge is made for this service and any acreage measured is guaranteed. The service can be of great benefit to the farmer in planning and carrying out his plantings since he will not underplant or overplant the program acreage, thus eliminating costly acreage adjustments.

### COMMODITY LOAN AND PURCHASE PROGRAMS

ASCS administers price support programs in Idaho for wheat, corn, wool, barley, oats, rye, dry edible beans, honey, milk and butterfat.

Support is achieved, singly or in combination, through loans, purchases, and payments, all at announced levels. Present legislation is designed to make some export commodities more competitive in world markets through market price support at or near world price levels. At the same time, growers' incomes are protected by supplementary price support payments.

For most commodities, loans are made directly to producers on the unprocessed commodity through ASCS county offices. Smaller quantities of some commodities are also purchased from producers. Butterfat and milk are supported through purchases of processed dairy products.

(Continued)

Loans are available for periods of six to eight months following harvest. Depending on the commodity, loans generally mature one to three months following the end of the loan availability. Purchases from producers are made at the time of maturity for the crop loan. In recent years, farmers also have been able to continue their price support loans on certain grains in farm storage beyond the first year, earning storage payments during the loan extension ("reseal") period. Farmers have also been able to extend their warehouse stored loans on certain grain for 1967 and subsequent crop years.

Price support loans to producers are "nonrecourse." With this type of loan, producers are not obligated to make good any decline in the market price of the collateral they have put up as collateral. If the market prices rise above support prices, producers can pay off their loans and market their commodity. If prices fail to rise above support prices, producers can deliver the commodity to CCC, with appropriate adjustments for quality and quantity, and discharge their obligation in full.

Support loans and purchases give farmers a ready means of promoting more orderly marketings, particularly in periods when bountiful harvest supplies threaten to push prices of farm commodities down to unfair levels.

Eligibility for price support loans and purchases of wheat, barley, and corn is conditioned on participation in allotment quota or commodity acreage diversion programs in effect for the particular crop.

Although ASCS, through its personnel and facilities, administers price support operations, the programs are authorized and financed by the Commodity Credit Corporation.

#### FARM STORAGE FACILITY LOAN PROGRAM

Loans are available to help farmers finance new facilities to store or condition crops they produce that are eligible for price support.

Eligible commodities are corn, oats, barley, grain sorghum, wheat, rye, soybeans, flaxseed, rice, dry edible beans, peanuts and sunflower seed.

The maximum loan is 85 percent of the cost for storage facilities and 65 percent of the net cost of the applicants needed dryer facility, or \$2,500 whichever is less. Total aggregate of loan amounts for an applicant cannot exceed \$25,000.

The loans are for five years from the date of disbursement, payable in four equal installments. The interest rate on the loans is 34 cents per month per \$100 for loans in effect prior to May 30, 1969, and 50 cents per month per \$100 for loans disbursed after this date.

### WOOL PROGRAM

Around 1945 the wool clip of the United States averaged about 350 million pounds. Since this period the annual wool clip has been steadily decreasing. Recognizing that wool is an essential and strategic commodity not produced in sufficient quantity in the United States, Congress in 1954, passed an Act to encourage an annual domestic production of about 300 million pounds of shorn wool. To illustrate the need for the program, it is estimated that in 1968 about 178 million pounds of shorn wool grease basis was produced.

The Secretary is directed to establish an incentive payment for shorn wool which will encourage a larger production. Under the Wool Act, the support price for pulled wool is also established at a level in relationship to the support price for shorn wool that will maintain normal marketing practices. This is primarily to avoid unusual shearing prior to marketing in order to obtain the

(Continued)

payments on shorn wool. This is accomplished by making payments on unshorn lambs sold to give the producer or feeder essentially the same net returns that he would receive if he sheared the animals and obtained the payment on shorn wool.

Payments are made to wool producers after the marketing year is over to bring the national average price received by all producers for wool sold up to the incentive price. Payments are at the rate in effect for the marketing year during which the wool is sold. The incentive payment rate for 1968 was announced at 67 cents for shorn wool.

Under the Act, mohair prices must be supported within the range of 15 percent above or below the percentage of parity at which wool is supported. There have been no mohair payments made in Idaho.

An agreement between the Secretary and the American Sheep Producers Council, approved in producer referendum held in September 12-23, 1966, authorized deductions from producer payments for advertising and promotion programs for wool and lambs. 1968 MARKETING YEAR SHORN WOOL PAYMENTS

#### COMMUNITY COMMITTEE ELECTIONS

Elections are conducted each fall to determine the committee who will serve the next year. The new committee took office

November 1st. Communities vary from one to eight depending upon the number of farms and farm areas in which representation is needed.

Nominating committees select a slate of nominees to be placed on a ballot each year. Ballots are sent to each eligible voter within the community. Ballots were tabulated in the county office and committees were determined by the number of votes the nominees received. These committees in addition to performing as delegates at a convention to select a county committee, also assist in carrying out programs and help to keep fellow farmers informed on purposes and provisions of ASCS programs.

#### COUNTY COMMITTEE

The newly elected community committee becomes delegates at the county convention. A new member of the county committee and first and second alternates are elected to serve along with two members who are carried over and continue to serve the remainder of their three-year term of office.

#### ADMINISTRATIVE EXPENSES - CALENDAR YEAR - 1969

County office operating expenses amounted to \$1,537,142 during calendar year 1969. This amount includes salaries for county personnel and committeemen, rent, utilities, employee benefits, equipment replacement and supplies. Also included are employer's contribution to employee fringe benefits and other items paid by the State office for county offices.
